4Science role in the Open Science and DSpace community

At 4Science We are driven by serving the open knowledge ecosystem.

Certified Platinum provider and main contributors of DSpace

Our goal is to anticipate the future making it more accessible

4Science created and maintains DSpace-CRIS

Experts in the field and enablers that can help with any situation

Open knowledge
empowering open access, supporting open science, advancing open scholarly communication.

FAIR data
Our solutions enable your data to be Findable, Accessible, Interoperable and Reusable

Interoperable solutions
ORCID best Certified Service Provider, Datacite Registered Service Provider, CERIF enablers, IIF open standards

Compliance & Quality
OpenAIRE guidelines, Certified Platinum Providers of DSpace, ISO 27001:2022, ISO 9001:2015

Security
Battle-tested solutions, secure by design; Trusted Providers of the Cloud Security Alliance

Certifications

4Science brings a high level of assurance to the services it provides for its clients. 4Science is the DSpace Certified Platinum Provider with the highest number of certifications

Shaping the future together

It's all about fully exploiting the cultural heritage, and not only preserving it: we believe it's crucial to choose a provider that guarantees domain expertise and the best visibility and accessibility of your heritage.

Investing in the ongoing support and strengthening as well as in the modernization of the other tools and functions, the ultimate goal of the right preservation solution is to create capable conditions for the provision of upgraded services to your public.

GLAM

We designed a state-of-art solution that fits with your needs and standards

Data Science in a digital Humanities Heritage framework

The goal of GLAM is to provide a **fully interoperable environment for integrating the traditional hermeneutic and interpretative work** of historical sciences, archaeology, artistic and cultural studies with data visualization and analysis.

In this way, we know that there may be a fundamental change in the way digital cultural heritage is experienced and analysed.

All-in-one state of the art solution for all digital material

www.4science.com

Humanities are witnessing a growth of available digital data:

- Databases
- Archival Materials
- Books
- Museum Objects
- Digital Born Cultural Resources
-

cultural heritage material cannot be analyzed without its CONTEXT

- Cultural data can be fragmentary, partial, biased.
- Scholars and cultural heritage professionals have to be able to **correlate different data sources**, to better **investigate the articulation of historical phenomena and of the transformation processes that affected human history and culture**.
- Digital Cultural Resources have to be analyzed together with all contextual information needed to answer research questions, such as:
 - (cultural, social, economic, technological...) production context of a document/object
 - contextual associations at different levels and scales (spatial, temporal, functional, etc.)

...context that can be efficiently explored with a digital library solution!

To move such an approach from theory to practice we need infrastructures and tools for integration, analysis and storage of digital data and resources.

Today most of the digital cultural resources and data are in the Digital Libraries.

Digital Libraries should provide tools for:

- modeling, visualising and analysing information, both in a qualitative and quantitative way, as well as collaboratively working on it
- highlighting the relationships between data at different scales and the network of contextual relations in which historical sources are involved
- to enter the daily workflow of historians, archaeologists and humanities scholars.

DIGITAL COLLECTIONS: ENABLING NEW IMMERSIVE EXPERIENCES

An extensible model to define a network of relationships to be discovered, browsed and studied.

Links are made between digital objects and an overview of artistic productions, thematic routes, historical paths...

...and all this allows to explore for real the contexts (historical, geographical, cultural) of the browsed digital objects.

You on your way to take your
stand beside the armies of
many Nations now fighting in
the Old World the great battle
for human freedom.
The Allies will gain new heart
& spirit in your company.
I wish that I could shake
the hand of each one of you

From Digital Records to Digital Cultural Landscapes

Beyond Digital Library Boundaries with DSpace

- Extending DSpace for Digital Cultural Heritage Management

Why DSpace?

- To achieve the outlined goals and build a state-of-art Digital Library Management System, open source software is preferable.
- Development of open source software gives an effective way to create Digital Library Management Systems with a small financial investment.
- Looking exactly at sustainability, among the most used open source Digital Library Management Systems, we chose DSpace.

www.4science.com

- DSpace has been extended for managing Digital Cultural Heritage
- IIIF based add-ons have been developed for curating and exploring digital objects
- An extended and extensible data model has been modeled to display contextual relationships at different levels and to manage different metadata schemas and conceptual models

Managing Galleries, Libraries, Archives, Museums

Ancient and modern books, archival fonds, journal fonds, museums objects, documents, audio, video, maps ...

Cultural Heritage materials can be explored in an integrated way, without losing domain metadata standards granularity

The applications can be extended to map further domains (tourism, botany.....)

Image International Interoperability Framework

- In the last years IIIF became the “de facto” standard for presenting, navigating and delivering digital images on the web all over the world.
- It defines several APIs for providing a standard method for describing, analysing and sharing images over the web, as well as "presentation-based metadata" about structured sequences of images.

An ecosystem built on IIIF

We developed 3 add-ons to
"enrich" the IIIF
experience.

- Image Viewer
- Document Viewer
- OCR & Transcription

The 3 add-ons implement
several curation task for
an easier digital resources
management

THE TRAGEDY OF HAMLET PRINCE of DENMARK.

ACT I. SCENE I.

Enter Bernardo and Francisco, two Sentinels.

Bar. **W**H's there?
Fran. Nay answer me; stand and unfold
your self.
Bar. Long live the King.
Fran. Bernardo?
Bar. He.
Fran. You come most carefully upon your hour.
Bar. 'Tis now struck twelve: get thee to bed Francisco,
For this relief much thanks; 'tis bitter cold,
And I am sick at heart.
Bar. Have you had quiet guard?
Fran. Not a Mouse stirring.
Bar. Well, good night:
If you do meet Horatio and Marcellus,
The rivals of my watch, bid them make haste.

Enter Horatio and Marcellus.

Fran. I think I hear them: Stand ho: who's there?

THE TRAGEDIE OF HAMLET, Prince of Denmarke.

Actus Primus. Scena Prima.

Enter Bernardo and Francisco two Centinels.

Bernardo,
Francisco?
Fran. Nay answer me: Stand to unfold
your self.
Bar. Long live the King.
Fran. Bernardo?
Mr. He.
Fran. You come most carefully upon your hour.
Bar. 'Tis now struck twelve: get thee to bed Francisco.
For this relief much thanks: 'tis bitter cold,
And I am sick at heart.
Bar. Have you had quiet Guard?
Fran. Not a Mouse stirring.
Bar. Well, good night: If you do meet Horatio and
Marcellus, the Rivals of my Watch bid them make haste.
Fran. I think I hear them: Stand: who's there?
Mr. Friends to this guard.
Bar. And I have seen you to the Dore.
Fran. Give you good night.
Mr. O for some touch of her who hath relieved you?
Bar. Bernardo has my place: give you good night.
Exit Fran.
Mr. Hail, Bernardo.
Bar. Say what is Horatio there?
Mr. A piece of him.
Bar. Well come Horatio, welcome good Marcellus.
Mr. What is this thing appeared again to night?
Mr. I have seen nothing.
Mr. Horatio, you are ever over-credulous.
And will our light be made bold of him
Touching this thy dreamt light, a voice from of us,
Therefore I have braced him along
With care, to watch the minutes of this Night,
That if a ghost appear to you,
He may appear to my eyes, and I speak to it.

Where now it burns, Marcellus, and thyself file,
The Bell then beating out.
Mr. Peste, breathe thee afire: Enter the
Lords where it comes againe.
Bar. In the same figure, like the King that's dead?
Mr. Tis even so: he lookt like this: Look on his face:
Bar. Look on his face: the King? Marcellus?
Mr. Much liker: but it carries a more terrible and
Warre: it would be spoke to.
Mr. O God, a Ghost!
Bar. What art thou that stay'st the time of us
Together with that pale and white forme
To which the Murders of our Father
Did sometimes much: By Heavens I charge thee
Mr. It is offended.
Bar. Set it stalk away.
Mr. Stay: I'll speak to it: Change then, for I
Know the voice.
Bar. How now Horatio? Now tremble & look
Upon this something more than Fancie's
What dost thou see?
Bar. Before my God, I might see day before
Without the terrible and true cometh
Of most dread eyes.
Mr. Is it not like the King?
Bar. As thou art to thy self,
Such was the very Ancient he had out,
When in Ambition Norway was beaten:
So from the voice, when in the angry state
He knew the fabled Pollux, enter for.
Tis strange.
Bar. Thus came before, but in this dead he
With Marshall Doffe, had been gone by our Watch.
Mr. In what particular thought to work I have
But in the graphic and scope of my Opinion,
This breathes some strange emotion to our State,
Mr. Good now, for down as will one be to it.

Flagellation of Christ

Date Issued

1458

Author(s)

Piero della Francesca  Pittore

Abstract

The Flagellation of Christ (probably 1468–1470) is a painting by Piero della Francesca in the Galleria Nazionale delle Marche in Urbino, Italy. Called by one writer an "enigmatic little painting,"[1] the composition is complex and unusual, and its iconography has been the subject of widely differing theories. Kenneth Clark called The Flagellation "the greatest small painting in the world".

^ Collapse

Physical Description

The theme of the picture is the Flagellation of Christ by the Romans during his Passion. The biblical event takes place in an open gallery in the middle distance, while three figures in the foreground on the right-hand side apparently pay no attention to the event unfolding behind them. The panel is much admired for its use of linear perspective and the air of stillness that pervades the work, and it has been given the epithet "the Greatest Small Painting in the World" by the art historian Kenneth Clark.

The painting is signed under the seated emperor OPVS PETRI DE BVRGO S[AN]C[T]I SEPVLCRI – "the work of Piero of Borgo Santo Sepolcro" (his town).

The Flagellation is particularly admired for the realistic rendering of the hall in which the flagellation scene is situated in relation to the size of the figures and for the geometrical order of the composition. The portrait of the bearded man at the front is considered unusually intense for Piero's time.

Abstract

The Council of Mantua of 1459, or Congress of Mantua, was a religious meeting convoked by Pope Pius II, who had been elected to the Papacy in the previous year and was engaged in planning war against the Ottoman Turks, who had taken Constantinople in 1453. His call went out to the rulers of Europe, in an agonized plea to turn from internecine warfare to face Christendom's common enemy.

Concilio di Ferrara

Bessarion (Greek: Βησσαρίων; 2 January 1403 – 18 November 1472) was a Byzantine Greek Renaissance humanist, theologian, Catholic cardinal and one of the famed Greek scholars who contributed to the so-called great revival of letters in the 15th century.

He was educated by Gemistus Pletho in Neoplatonic philosophy and later served as the titular Latin Patriarch of Constantinople. He eventually was named a cardinal and was twice considered for the papacy.

His baptismal name was Basil (Greek: Βασίλειος, Basileios or Basilius). The name Bessarion he took when entering the monastery. He has been mistakenly known also as Johannes Bessarion (Italian: Giovanni Bessarione) due to an erroneous interpretation of Gregory III Mammas.

The Aggregation

- Possibility of aggregating different contents present within the Digital Library, even organizing them in a hierarchical mode
- Enhancing relationships according to an even different declination, with the possibility of "disassembling" and "reassembling" them based on the changing needs of institutions.

Aggregation Tree

The Aggregation

Using Aggregations, any type of entity can be correlated

- all buildings and all buildings patrons within the Digital Library

The Aggregation

- Each "object" in DSpace can belong to multiple Aggregations.
- Each "object" can be presented differently depending on the Aggregation with which it is connected.
- The logical views that can be created are virtually "infinite."

Paths

Discovering...
...new ways to explore our
digital libraries.

See all

Cultural Paths and storytelling

Paths

Paths mainly tell "stories."

Paths can also include objects of different types (Documents, Photographs, People, Events, Places, etc.).

The same object can be included in different Paths

Paths: one concept, several declinations

Historical contexts,
Itineraries
Exhibitions,

...

www.4science.com

Paths creation and storytelling

- With DSpace-GLAM, it is easy to create paths by relating different entities, highlighting contexts, structuring exhibitions and enhancing itineraries
- Greater interaction between text and digital resources makes it possible to build real narratives around cultural heritage

Structuring Digital Cultural Landscapes

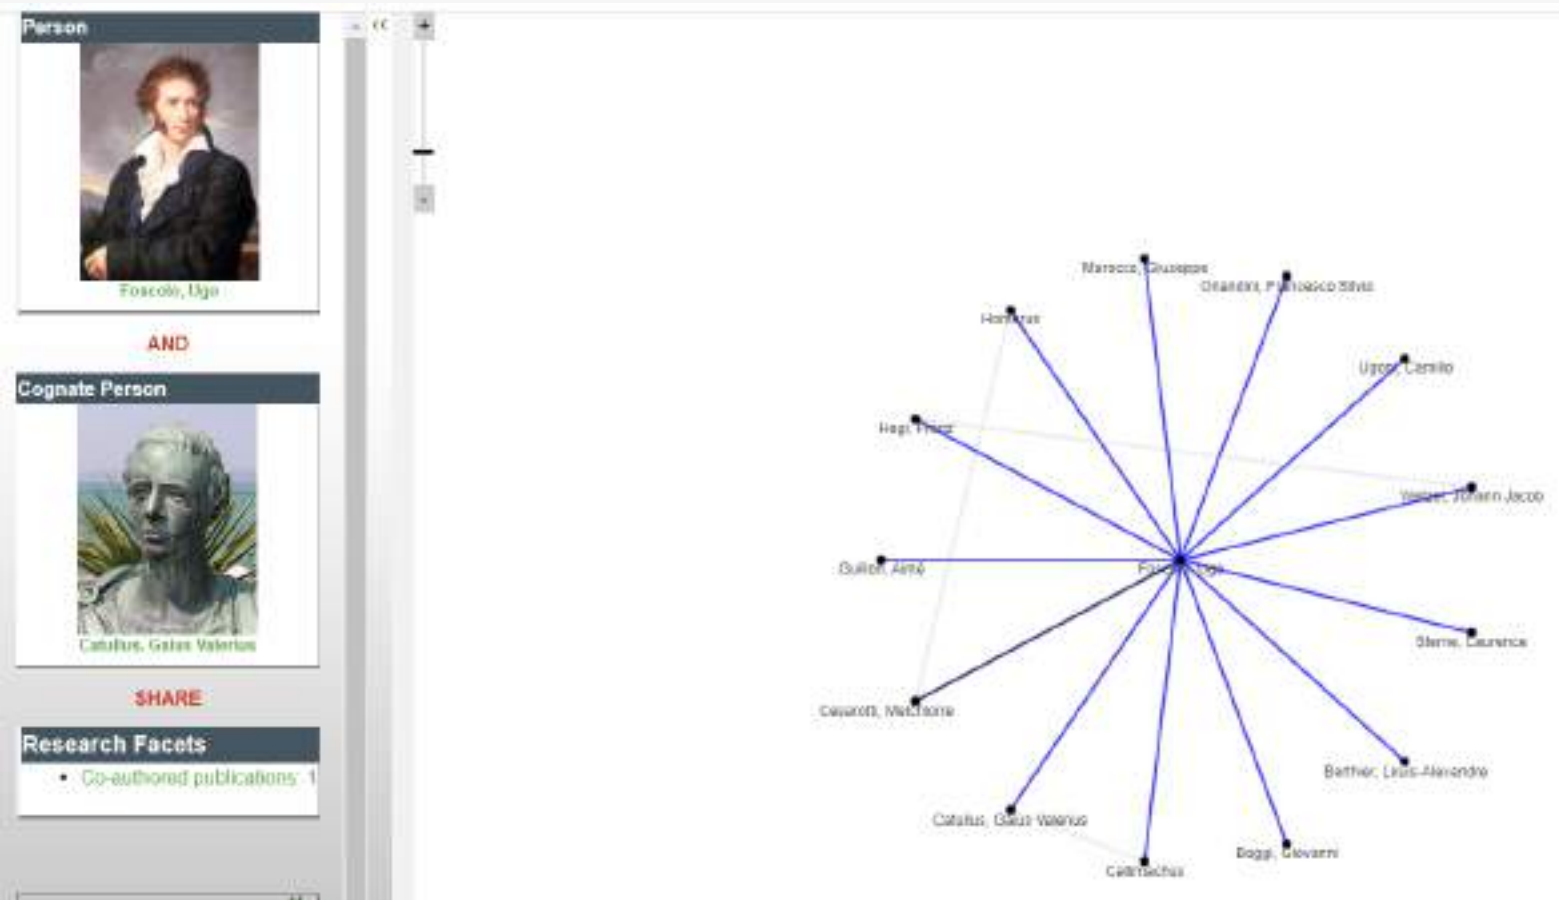

- Through DSpace extension for Cultural Heritage, today many institutions are enhancing the relationships among their content, shaping "their" digital cultural landscapes according to the dimensions of variability needed
- Digital cultural landscapes are “virtual ecosystems” in which digital cultural heritage subsets are related with entities such as people, places, events, fonds, etc., according to different visions and interpretations, in order to generate new knowledge and to open up new perspectives.
- Such "digital landscapes" can be visualized either as Semantic Network, Paths or Aggregations.

The Network Lab: explore the relationships graph

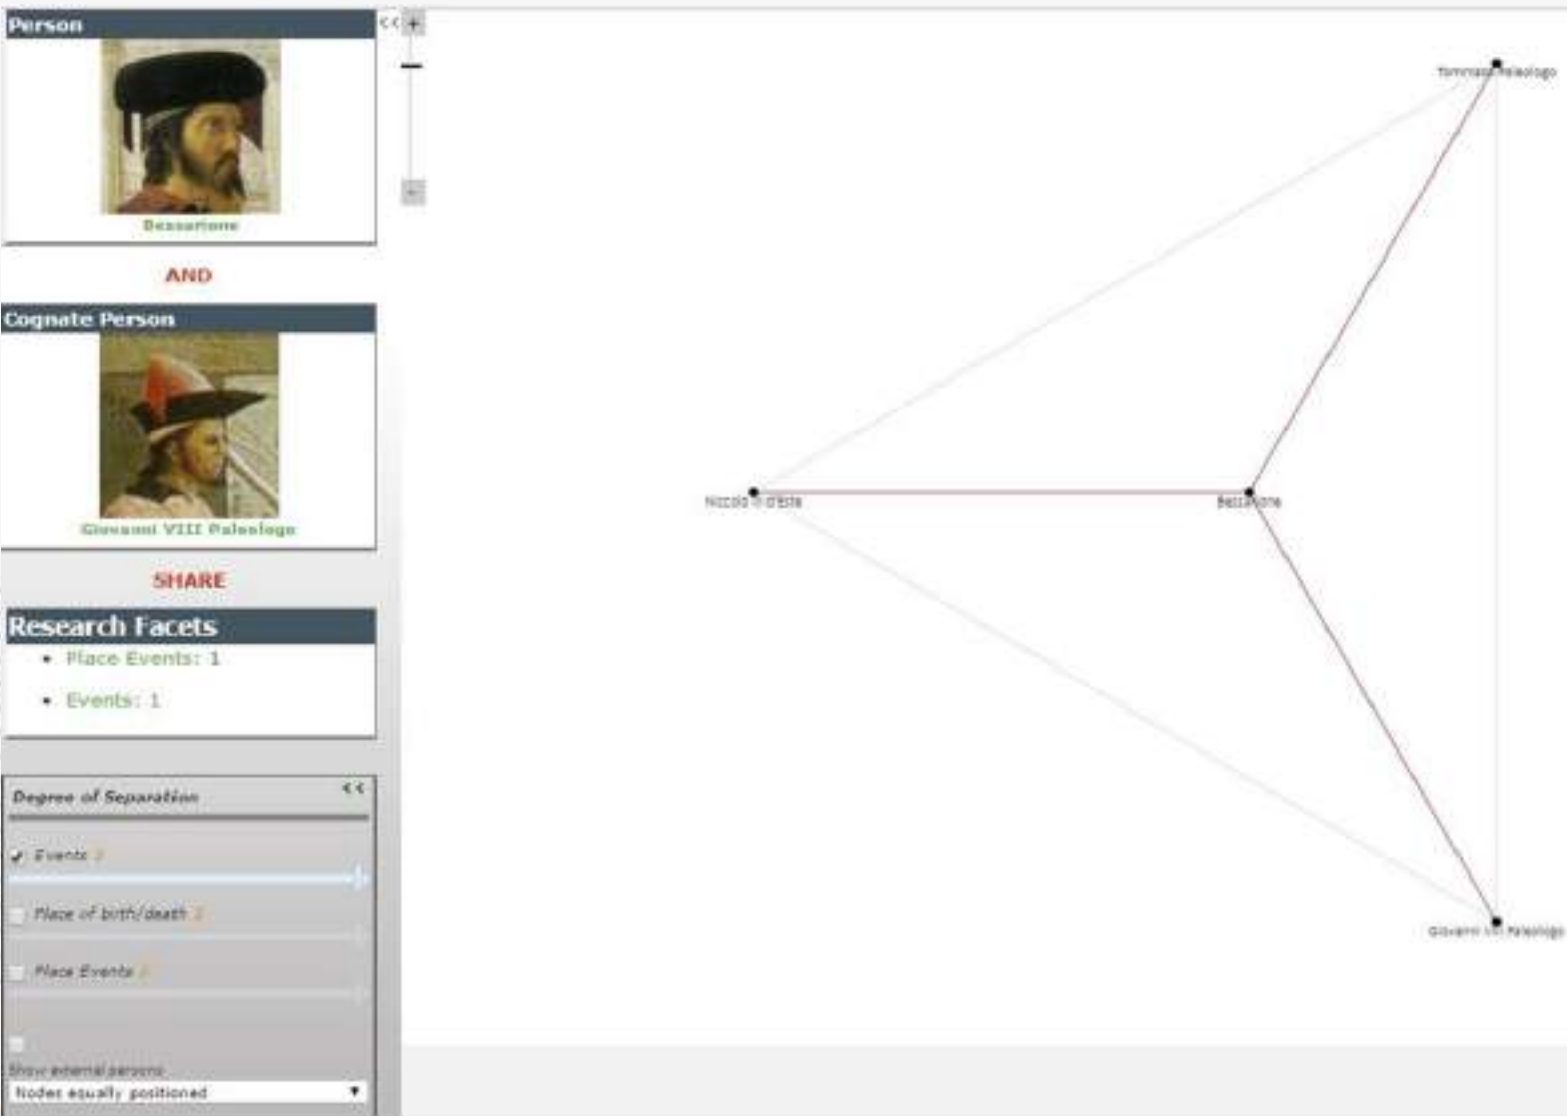

- For example you can navigate through the different Byzantine emperors who commissioned interventions on a building and explore their relationships with architects and workers who actually did the work
- In this way it is possible to uncover "hidden relationships" producing new knowledge

www.4science.com

Exploring literary interests and collaborations (a cultural context)

Explore historical events

Where are we going?

Towards a Digital Library

- Different navigation modes
- Different tone of voices
- Different ships

Everyone should reach the **treasure**

Share your knowledge

A Digital Library many audiences

- The new DSpace-GLAM expands its ability to enhance content and make it usable through diversified consultation channels, also based on the needs of different types of audiences:
 - specialist, related to research and university studies
 - belonging to the sphere of school learning
 - tourists, interested in discovering or acquiring new knowledge about the territories being visited
 - citizens, who wish to acquire information on facts, places, objects

We empower knowledge sharing and collaboration To help you generate solutions for social good and innovation

We are fully committed to being systemic enablers of **innovation, knowledge exchange and connecting cultures**.

Open-source development is a powerful collaborative mechanism to these ends, as it supports transparency and cost-effectiveness, so we constantly innovate to enhance our information and data management tools....

That's why we are the **lead contributor and member of the Dspace community**, and it is only by providing our services to institutions that we can continue to invest resources in co-creating the global infrastructure that supports research and innovation.

We'd love you to be a part of it.
